

Kees Biesheuvel

- Technology Innovation manager
at Dow
- Cluster Director of the industrial heat
cluster at the Institute for
Sustainable Process Technology

Present heat integration

- From high to low temperature and pressure.
- Intermediate valorization
- Limited by temperature levels.
- One directional ending in high volume low value waste heat.

With heat pump technology

- Circular, temperature and pressures
- Intermediate valorization
- No Limits with respect to temperature levels.
- Less on purpose generated heat
- Low volume low value waste heat.
- Highest value of Power
